

System Architecture and System Design

The KidSafe CMS follows a **three-tier architecture**:

1. Presentation Layer

HTML templates (e.g., child_library.html)

Provides child-friendly and adult dashboards

2. Application Layer

Django framework handles:

- Business logic

- Content filtering

- Approval workflows

3. Data Layer

PostgreSQL (or SQLite for development)

Stores:

- Child profiles

- Content

- Activity logs

System Design Overview

MVC (Model-View-Controller) pattern using Django:

- Models: ChildProfile, Content, ActivityLog

- Views: Handle logic and user interaction

- Templates: Render UI
